Introduction

Use this publication if your application includes the Kinetix® 5100 drive family and Kinetix TLP servo motors or any of the other compatible Allen-Bradley® motors. The 2198-K51CK-D15M feedback connector kit is available for use when Kinetix MPL, MPM, MPF, MPS or Kinetix TL and TLY rotary motors and linear actuators are used with flying-lead cables. For more Kinetix drive and motor information, see the Kinetix Motion Control Selection Guide, publication [KNX-SG001](#), or Motion Analyzer software.

The purpose of this publication is to assist you in identifying the drive system components and accessory items that you need for your Kinetix 5100 drive and motor combination. Diagrams in this publication illustrate how many of the common drive accessory items are used in a typical system. See the Kinetix Servo Drives Specifications Technical Data, publication [KNX-TD003](#), for detailed accessory descriptions and specifications.

Drive/motor system combinations also include the following:

- Motor/cable combinations table
- Drive and motor performance specifications table
- Torque/speed curves with each motor matched to the drive that provides optimum performance

Performance specification data and curves reflect nominal system performance of a typical system with motor and drive at the rated ambient temperature and line voltage. For additional information on ambients, line conditions, and valid combinations that are not shown in this publication, refer to the Motion Analyzer system sizing and selection tool.

IMPORTANT These system combinations do not include all possible motor/drive combinations. See the Motion Analyzer system sizing and selection tool to verify compatibility. Access Motion Analyzer at <https://motionanalyzer.rockwellautomation.com>.

Hardwired Safety Configuration

Kinetix 5100 servo drives are capable of safe torque-off (STO) safety functions via hardwired connections. In this example, the safe torque-off (STO) connectors are wired to external safety devices with cascading hardwired safety-connections from one drive to another.

Hardwired Safe Torque-off

Determine What You Need

For each Kinetix 5100 drive system, the drive and servo motor catalog numbers are required to determine the motor power and feedback cable catalog numbers. A 24V DC power supply is also required for digital I/O circuitry, motor brake circuitry, and control power on 2198-E4xxx-ERS (400V-class) drives.

- For applications with Kinetix TLP servo motors, use 2090-CTFB-MxDD feedback cables with drive-end (D-sub) connector for direct connection to the Kinetix 5100 drive. If you build your own flying-lead cables, 2198-K51CK-D15M feedback connector kits are available.
- For applications with Kinetix MPL, MPM, MPF, and MPS servo motors, use 2090-CFBM7DD feedback cables with drive-end (D-sub) connector for direct connection to the Kinetix 5100 drive. Use 2198-K51CK-D15M connector kits with 2090-CFBM7DF flying-lead feedback cables.
- For applications with Kinetix TLY servo motors, use 2090-CFBM6DD feedback cables with drive-end (D-sub) connector for direct connection to the Kinetix 5100 drive when battery backup is not required. When battery backup is required, use 2198-K51CK-D15M connector kits with 2090-CFBM6DF flying-lead feedback cables.
- For applications with Kinetix TL servo motors, use 2090-DANFCT-Sxx feedback cables and remove the drive-end connector. Use 2198-K51CK-D15M connector kits for making feedback connections and include a customer-supplied battery when battery-backup of position data is required.
- 2198-TBIO I/O terminal block
- 2198-USBC USB cable and 2198-USBF USB filter

Optional equipment includes the following:

- Bulletin 2198 AC line filters
- 2198-AUXKIT auxiliary feedback connector kit
- Bulletin 2097 or 2198 shunt resistors
- 1585J-M8CBJM-x (shielded) Ethernet cable

Example diagrams of the required and optional equipment are provided.

Motor feedback connections are made at the 15-pin motor feedback (MFB) connector. These examples illustrate how you can use the 2198-K51CK-D15M connector kit for making these connections. Auxiliary feedback connections are made at the 10-pin auxiliary feedback connector (AUX) with the 2198-AUXKIT auxiliary feedback connector kit. This port supports incremental encoder types only.

Kinetix 5100 (200V-class) Drives with Kinetix MPL Motors

This section provides system combination information for the Kinetix 5100 drives (with 230V, nominal input) when matched with Kinetix MPL (200V-class) low-inertia servo motors with absolute high-resolution encoders or TTL incremental encoders. Included are motor power/brake and feedback cable catalog numbers, system performance specifications, and the optimum torque/speed curves.

These system performance tables and torque/speed curves reflect single-phase and three-phase drive operation with 200V-class motors; however, only 2198-E1004-ERS, 2198-E1007-ERS, 2198-E1015-ERS, and 2198-E1020-ERS drives are capable of single-phase operation.

IMPORTANT The Kinetix MPL low-inertia motors on this page are equipped with DIN connectors (specified by 7, for example, MPL-A310P-xx7xAA) and are **not** compatible with cables designed for motors equipped with bayonet connectors (specified by 2, for example, MPL-A310P-xx2xAA). The motors with bayonet connectors are discontinued and require 2090-XXNxMP (bayonet) cables. For help with migration or to select bayonet transition cables, contact your Rockwell Automation sales representative.

Kinetix 5100 (400V-class) Drives with Kinetix MPL Servo Motors

This section provides system combination information for the Kinetix 5100 drives (with 400 and 480V, nominal input) when matched with Kinetix MPL (400V-class) low-inertia motors with absolute high-resolution encoders. Included are motor power/brake and feedback cable catalog numbers, system performance specifications, and the optimum torque/speed curves.

IMPORTANT The Kinetix MPL motors on this page are equipped with DIN connectors (specified by 7, for example, MPL-A310P-xx7xAA) and are **not** compatible with cables designed for motors equipped with bayonet connectors (specified by 2, for example, MPL-A310P-xx2xAA). The motors with bayonet connectors are discontinued and require 2090-XXNxMP (bayonet) cables. For help with migration or to select bayonet transition cables, contact your Rockwell Automation sales representative.

Kinetix 5100 (200V-class) Drives with Kinetix MPAS Linear Stages

This section provides system combination information for the Kinetix 5100 drives (with 230V, nominal input) when matched with Kinetix MPAS (400V-class) integrated (ballscrew) linear stages with absolute high-resolution encoders. Included are motor power/brake and feedback cable catalog numbers, system performance specifications, and the optimum force/velocity curves.

These system performance tables and torque/speed curves reflect single-phase and three-phase drive operation (230V, nominal input) with 200V-class motors; however, only 2198-E1004-ERS, 2198-E1007-ERS, 2198-E1015-ERS, and 2198-E1020-ERS drives are capable of single-phase operation.

Kinetix 5100 (200V-class) Drives with Kinetix LDC Linear Motors

This section provides system combination information for the Kinetix 5100 (200V-class) drives when matched with Kinetix LDC iron-core linear motors. Included are power and feedback cable catalog numbers, system performance specifications, and the optimum force/velocity curves.

These system performance tables and torque/speed curves reflect single-phase and three-phase drive operation (230V, nominal input) with 200V-class motors; however, only 2198-E1004-ERS, 2198-E1007-ERS, 2198-E1015-ERS, and 2198-E1020-ERS drives are capable of single-phase operation.

(1) Values represent the range between no cooling (low value) and water cooling (high value).

(2) Drives selected are for motors with no cooling. System current, force, and power ratings can be limited by the drive for air and water cooled motors. In those situations, use a higher power drive to achieve full-system ratings for air and water cooled motors.

Performance specification data and curves reflect nominal system performance of a typical system with motor ambient at 40 °C (104 °F), drive ambient at 50 °C (122 °F), and rated line voltage. For additional information on ambient and line conditions, refer to Motion Analyzer software.
