DAPS

-  Size
0008 ... 8000
-  Torque
8 ... 8000 Nm
-  Swivel angle
0 ... 90°

The quarter turn actuators DAPS are specially tailored to the requirements of the process industry. The torque is generated via a scotch yoke mechanism, which helps to overcome the valve's high breakaway torques. Given their robustness and graduated torques, the quarter turn actuators DAPS are predominantly used to control valves through which various media flow and whose rotation angle is limited to 90°, e.g. ball valves and butterfly valves.

- Compact design
- Torque characteristics adapted to process valves
- The single-acting actuator has half the torque of the double-acting actuator for the same housing size
- Low wear thanks to the simple and robust mechanical system
- Adjustable swivel angle
- Selected types in accordance with the ATEX directive for potentially explosive atmospheres

High-temperature version

DAPS T4

-  Size
0015 ... 0960
-  Torque
15 ... 960 Nm
-  Swivel angle
0 ... 90°
-  Temperature range
-20 ... +150°

The high-temperature version of the quarter turn actuator DAPS-T4 is specifically designed for the requirements for controlling process valves used with hot media flows.

- Compact design
- Torque characteristics adapted to process valves
- The single-acting actuator has half the torque of the double-acting actuator for the same housing size
- Low wear thanks to the simple and robust mechanical system
- Adjustable swivel angle

- Selected types in accordance with the ATEX directive for potentially explosive atmospheres
- → www.festo.com/en/ex
- Connection pattern to NAMUR VDI/VDE 3845 for mounting solenoid valves

Stainless-steel version

→ Page 41

DAPS CR

-  Size
0015 ... 0480
-  Torque
15 ... 480 Nm
-  Swivel angle
0 ... 90°

Single-acting and double-acting quarter turn actuators DAPS in stainless steel are used for automating valves with a 90° swivel angle. The single-acting variant has different spring forces for different supply pressures.

- Low wear thanks to the simple and robust mechanical system
- Torque characteristics adapted to process valves
- Selected types in accordance with the ATEX directive for potentially explosive atmospheres
- → www.festo.com/en/ex

- Connection pattern to NAMUR VDI/VDE 3845 for mounting solenoid valves

Version with handwheel

→ Page 54

DAPS MW

-  Size
0106 ... 1920
-  Torque
106 ... 1920 Nm
-  Swivel angle
0 ... 90°

When the supply pressure is switched off, the handwheel can be used to manually change the position of the valve or actuator. The handwheel therefore acts as a manual emergency override.

- Low wear thanks to the simple and robust mechanical system
- Torque characteristics adapted to process valves
- Selected types in accordance with the ATEX directive for potentially explosive atmospheres

Torque for size at 5.6 bar
and swivel angle 0°

**Note**

The operating torque of the actuator must not be greater than the maximum permissible torque listed in ISO 5211 in relation to the size of the mounting flange and of the coupling.

1) Minimum operating pressures vary for single-acting quarter turn actuators depending on spring quantity

2) Corrosion resistance class CRC 3 to Festo standard FN 940070

High corrosion stress. Outdoor exposure under moderate corrosive conditions. Externally visible parts with primarily functional surface requirements which are in direct contact with a normal industrial environment.

Torque for size at 5.6 bar
and swivel angle 0°

**Note**

The operating torque of the actuator must not be greater than the maximum permissible torque listed in ISO 5211 in relation to the size of the mounting flange and of the coupling.

1) Corrosion resistance class CRC 3 to Festo standard FN 940070

High corrosion stress. Outdoor exposure under moderate corrosive conditions. Externally visible parts with primarily functional surface requirements which are in direct contact with a normal industrial environment.
